

Tips and trends for homeowners, buyers and sellers

10 Things to Know About Your Sprinkler System

For those who've recently moved and have never had a yard to care for, or for those who are tired of manually dragging the hose and portable sprinkler around their property, a sprinkler system may be right for you and your lawn care needs. These are the top 10 things you should know when dealing with sprinklers:

- 1 Access**—Make sure to have a licensed plumber inspect any installed sprinkler system to ensure everything relating to water flow is working properly.
- 2 Heads**—There are two types of sprinkler heads: fixed and rotary. Plan your head usage according to the layout of your property.
- 3 Connections**—Consider using funny pipe to connect your sprinkler heads with the standard poly pipe—it's extremely flexible and virtually unbreakable.
- 4 Hours of Operation**—Early morning sprinkler use prevents mold and mildew from forming on your lawn.
- 5 Pressure**—Water pressure needs to be optimized to ensure proper lawn coverage and to avoid damaging your sprinkler heads.

- 6 Winterization**—Make sure all water is cleared out of your pipes during the winter months to prevent freezing and, in turn, broken pipes. Consider hiring a service provider to assist.
- 7 Solenoids**—A fancy term for valves, these help determine the zone of your yard that water is directed to and at what time, providing efficient coverage.
- 8 Roots**—Plan ahead and make sure no tree roots are interrupting the piping routes for your sprinklers, saving you a potential headache down the line.
- 9 Rain Sensors**—Most water conservation laws require you to install rain sensors to avoid overwatering and waste.
- 10 Aim**—Check your local ordinances to ensure your sprinklers are being aimed only at areas where watering is permitted.

Preventing Infestations

Your home should be a safe space where you can relax. That's why one of the worst feelings as a homeowner is when harmful insects invade your property. Here's how to avoid common infestations.

Ants—Be sure to sweep and vacuum indoors frequently to prevent ants from invading and feeding on stray crumbs. To get rid of these pests, use either a common insecticide, or boric acid or borax powder. Ants pick up these particles and take them back to their nest, hopefully eliminating the problem at the source.

Cockroaches—If your home is clean and tidy, these bugs won't stick around. Without crumbs or food sitting out, your home should be roach-free. If you see them, look for cracks in the walls or floor, and seal with duct tape temporarily to prevent the pests from moving about freely.

Wasps—These dangerous insects congregate around garbage bins or exposed food. They also can nest around your home, usually in garages, attics, under eaves or in nearby landscaping. You can spray the hive at night to kill the pests, but be careful—aggressive wasps may require help from trained professionals.

Mosquitoes—These pests need standing water to breed, so be sure to eliminate potential sources, including open soda cans/water bottles, kiddie pools or bird baths. If you have a standing water source, be sure to filter or clean it regularly to prevent eggs from hatching.

Home Upgrades to Attract Millennial Buyers

Millennials are starting to become a force in the real estate market. But with any new generation of buyers, tastes and needs of clientele change. What home features are millennials looking for? Here we cover a few upgrades to attract these new potential buyers.

Smart tech—It's no secret that younger generations are entrenched in the hottest or newest technologies on the market. What can really set your home apart from more traditional spaces is upgrading to make the house "smarter."

Whether security systems, appliances or climate control systems, smart devices not only can make your home run more efficiently, but can also show buyers your property is modern and a great investment.

Home office space—Even before the pandemic, younger generations gravitated more toward the idea of working from home. Think about

converting or staging an extra bedroom into a dedicated work-at-home space.

This will help buyers truly envision how their life may look after purchasing the home.

Green home—Millennials trend toward being more environmentally conscious and expect their future home to be as well.

When marketing your property, be sure to highlight all of the great energy-saving/energy-efficient features you may have currently installed. You may also want to consider adding new green appliances, such as a water-conserving dishwasher, or more heat- and A/C-efficient windows and doors to show potential buyers you mean business when it comes to conservation.

USB charging outlets—People are more connected to their devices than ever before,

with millennials being one of the

Say Yes to CRS

Buying or selling a home can seem like an overwhelming task. But the right REALTOR® can make the process easier — and more profitable.

A Certified Residential Specialist (CRS), with years of experience and success, will help you make smart decisions in a fast-paced, complex and competitive marketplace.

To earn the CRS Designation, REALTORS® must demonstrate outstanding professional achievements — including high-volume sales — and pursue advanced training in areas such as finance, marketing and technology. They must also maintain membership in the NATIONAL ASSOCIATION OF REALTORS® and abide by its Code of Ethics.

Work with a top-producing REALTOR®—contact a CRS today.
